

Employee ID Card Lifecycle Management System

Introduction

In modern organizations, employee identification cards are essential for security, access control, attendance tracking, and organizational identity. Employees frequently require new ID cards due to onboarding, loss, damage, departmental transfers, or expiration. In many organizations, the request process is still handled manually through emails, spreadsheets, or paper forms.

Manual processing introduces several challenges:

- Delayed approvals
- Lack of visibility into request status
- Duplicate requests
- Increased administrative workload
- Poor audit and tracking capabilities

To address these issues, a digital solution is required that automates the entire request lifecycle while ensuring transparency, accountability, and efficiency.

The proposed solution leverages the ServiceNow platform to build a centralized Employee ID Card Lifecycle Management System that automates request submission, approval workflows, task assignment, and notifications.

Problem Statement

Organizations face multiple operational challenges while managing employee ID card requests.

Existing Process

1. Employee sends email to HR/Admin.
2. Manager verifies request manually.
3. HR processes request.
4. Status updates are communicated manually.
5. No centralized tracking exists.

Challenges

Lack of Standardization

Different departments follow different request procedures.

Approval Delays

Managers may overlook emails or fail to respond promptly.

No Real-Time Tracking

Employees cannot determine the status of their requests.

Administrative Overhead

HR and Admin teams spend significant time managing requests manually.

Proposed Solution

The proposed Employee ID Card Lifecycle Management System will automate the complete request process using ServiceNow.

Key Features

Digital Request Submission

Employees can submit requests through a Service Catalog Item.

Request Types:

- New ID Card
- Replacement ID Card
- Lost ID Card
- Damaged ID Card
- Temporary Visitor Card

Automated Approval Workflow

Requests are routed automatically to the employee's reporting manager for approval.

Task Generation

Upon approval, a task is automatically created for the administrative team.

Automated Notifications

Notifications are sent during:

- ☐ Request submission
- ☐ Approval
- ☐ Rejection
