

PROJECT DOCUMENTATION

Employee ID Card Request Management System

Abstract

The Employee ID Card Request Management System is a ServiceNow-based application developed to automate the employee ID card request process within an organization. The system allows employees to submit requests for new or replacement ID cards through a Service Catalog Item. The application routes requests for manager approval, automatically creates tasks for the administration team, and sends notifications after approval.

The project reduces manual effort, improves transparency, and provides a centralized platform for tracking employee ID card requests.

Introduction

Employee ID cards are important for employee identification, security, access control, and organizational management. Traditional methods of requesting employee ID cards involve emails, spreadsheets, or paper-based forms, which often result in delays and lack of visibility.

To overcome these challenges, the Employee ID Card Request Management System was developed using ServiceNow. The system automates request submission, approval workflows, task creation, and notification management.

Problem Statement

Many organizations still use manual processes to manage employee ID card requests.

Challenges include:

- Manual request handling
- Approval delays
- Lack of request tracking
- Increased administrative workload

- Communication gaps

These challenges reduce efficiency and increase processing time.

Objectives

The objectives of the project are:

Primary Objectives

- Automate employee ID card requests.
- Reduce paperwork and manual intervention.
- Improve approval efficiency.
- Enable request tracking.
- Automate task assignment.
- Provide notification updates.

Secondary Objectives

- Improve user experience.
- Ensure process transparency.
- Maintain request history.

Platform Used ServiceNow Developer Instance

Development Modules

- ServiceNow Studio
- Service Catalog
- Flow Designer
- Custom Tables
- Notifications
- Form Designer

Application Development

Step 1: Creation of Application

A custom application named:
Smart Employee ID Management
was created using ServiceNow Studio.

Purpose

The application serves as a centralized platform for managing employee ID card requests.

Application Components

- Custom Table
- Catalog Item
- Approval Flow
- Notification Module
- Access Controls

4. Custom Table Development

A custom table was created to store employee ID request information.

Table Name

Employee ID Request

Fields Created

Field Name Description

Employee Name Employee requesting ID card

Employee ID Employee identification number

Department Employee department

Request Type New, Lost, Damaged, Replacement

Reason Purpose of request

Approval Status Approval state

Purpose

The table stores all request records and acts as the primary data repository for the application.

5. Form Design Development

A user-friendly form was designed for employee request submission.

Form Fields

Employee Information

- Employee Name
- Employee ID
- Department

Request Information

- Request Type
- Reason

Validation

Mandatory fields were configured to ensure complete request submission.

Benefits

- Improved usability
- Reduced data entry errors
- Standardized request collection

6. Catalog Item Development

A Service Catalog Item was created to allow employees to submit requests through the Service Portal.

Catalog Item Name

Employee ID Card Request

Variables Created

Variable

Type

Employee Name

Single Line Text

Employee ID

Single Line Text

Department

Choice

Request Type

Choice

Reason

Multi-Line Text

Variable	Type
Urgency	Choice
Temporary ID Requested	Yes/No

Functionality

Employees can submit requests using a structured catalog form.

7. Workflow Development Using Flow Designer

A workflow was created using Flow Designer to automate the request lifecycle.

Flow Name

Employee ID Approval Flow

Trigger

Employee ID Request Created

The workflow starts automatically whenever a new request record is created.

Approval Action

An approval step was configured using:

Ask For Approval

Purpose

The request is routed to the manager for review and approval.

Approval Rule

Anyone Approves

Conditional Logic

An IF condition was configured.

Condition

Approval State = Approved

Purpose

The workflow proceeds only when approval is granted.

Notification Integration

A notification action was configured.

Notification Name

Employee ID Approved

Purpose

Notify employees after request approval.

The screenshot shows the 'Notification [sysevent_email_action]' configuration page in ServiceNow. The left sidebar contains a navigation menu with categories like Data, Security, User Interface, and Other. The main content area is titled 'New record' and includes a description: 'Use Notifications to notify users about specific activities in ServiceNow, such as updates to incidents or change requests. Notifications allow administrators to specify: When to send the notification, Who receives the notification, What content is in the notification.' Below this, there are fields for 'Name' (empty), 'Application' (set to 'Smart Employee ID Management'), 'Table' (set to '-- None --'), 'Mandatory' (checkbox), 'Category' (set to 'Uncategorized'), and 'Active' (checkbox, checked). A section for 'When to send' is expanded, showing 'When to send', 'Who will receive', and 'What it will contain' tabs. The 'When to send' tab is active, displaying a list of circumstances under which notifications can be sent: 'A record is Inserted or Updated into the Table specified above', 'The specified event is fired', and 'Via a Flow Action'. The bottom of the page shows the 'Scope: Smart Employee ID Management' and 'Update Set: Default'.

Notification Content

The notification informs the employee that:

- The request has been approved.
- The administrative team has been assigned a task.

Results

The project successfully automated the employee ID card request process.

Achievements

- Automated request submission
- Automated approval workflow
- Automated task creation
- Automated notifications
- Centralized request management

Benefits

- Reduced processing time
- Increased transparency
- Improved efficiency
- Better tracking and reporting

Conclusion

The Employee ID Card Request Management System successfully automates the complete employee ID card request lifecycle using ServiceNow. The application provides a structured workflow for request submission, approval management, task creation, and notifications. By reducing manual effort and improving process visibility, the system enhances organizational efficiency and user satisfaction.
